## Question 3

(a)

| (i) | Cash will increase by $£ 16000$, stock will decrease by $£ 10000$. Thus current <br> assets will increase by $£ 6000$ and working capital will increase by $£ 6000$ |
| :--- | :--- |
|  | (ii) |
|  | Stock will increase by $£ 4250$, creditors will increase by $£ 4250$. Thus current <br> assets will increase by $£ 4250$, current liabilities will increase by $£ 4250$, so <br> there will be no change in working capital. |
|  | (iii) |
| Cash will increase by $£ 3000$, so working capital will increase by $£ 3000$ |  |
| (iv) | Bank will increase by $£ 25000$ and current assets will increase by $£ 25000$. Bank <br> overdraft/creditors will increase by $£ 9000$ and current liabilities will increase <br> by $£ 9000$. Thus working capital will increase by $£ 16000$. |
|  | Stock will decrease by $£ 1500$, cash/debtors will increase by $£ 1$ 300. Thus <br> current assets will decrease by $£ 200$ and working capital will decrease by $£ 200$. |
|  |  |

1 mark for effect on working capital
1 mark for changes in current assets/current liabilities
(b)

Evaluate means that candidates should be looking for strengths and weaknesses and draw a conclusion. So, award $\mathbf{1}$ mark for strengths, $\mathbf{1}$ mark for weaknesses and $\mathbf{1}$ mark for conclusion

Example arguments for

- 2:1 means that debts can easily be paid as they fall due
- $2: 1$ is clearly the industry benchmark and that will give the firm confidence

Example arguments against

- It might be possible to manage on less that 2:1 and channel capital into profit generating assets
Conclusion
- 2:1 steers a middle road between over and under trading and is clearly endorsed by practice in the trade
- Perhaps the firm could manage on something nearer 1:1, providing the bank manager is friendly etc.

## Question 4

(a) (i) $\quad$ Current ratio $=\underline{\text { current assests }}$

1 mark
Accept if expressed as ratio or division sign, e.g.:
Current assets : current liabilities
Current assets $\div$ current liabilities
Accept if described as calculation, e.g.:
Current assets divided by current liabilities
Do not accept abbreviation, e.g.:

## $\frac{\mathrm{CA}}{\mathrm{CL}}$

(a) (ii) Rate of Stock turnover $=\underline{\text { cost of sales* }}$ average stock

1 mark

* accept 'cost of goods sold'

Accept 'opening stock + closing stock divided by 2' as alternative to 'average stock'
(accept if this phrase is shown as a formula, e.g.:
(Opening Stock + Closing Stock) / 2)
Do not accept 'Stock' ('Average Stock' or the above alternative is required).
(a) (iii) Mark up = gross profit cost of sales*

1 mark

* accept 'cost of goods sold'

Accept with or without " $\times 100$ "
Do not accept Gross Profit
Sales
Do not accept abbreviation, e.g.: $\frac{G P}{G S}$
COGS
(b) (i) Calculate the net profit for 2007

| Net Profit to Sales | $=$ | Net Profit |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Sales |  |  |

| 8 | $=$ | Net Profit |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |

| $8 \times £ 420000$ | $=$ | Net Profit |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 100 |  |  |  |  |

| Net Profit | $=\\| 33600$ | $\square$ |
| :---: | :--- | :--- | :--- |

2 marks for correct answer of $£ 33600$
1 mark for evidence of correct method (but wrong answer)
(b) (ii) Calculate the gross profit margin for 2007

Mark up is $50 \%$ so

| Let Cost price $=$ | $£ 2$ | Mark up 50\% |
| :--- | :--- | :--- |
| So Profit must be | $£ 1$ |  |
| And Selling price | $£ 3$ | Margin $33.3 \%$ |

## Correct answer: $\mathbf{3}$ marks

Correct method (but wrong answer): $\mathbf{2}$ marks
Selection of mark-up figure 50\%: 1 mark

## 3 marks

(b) (c) Evaluation of performance between 2006 and 2007

Comment on profitability (1 mark) with figure (1 mark).
Comment on liquidity (1 mark) with figure (1 mark).
Decision based on evidence (1 mark).

## Example answer:

Since Monty has lowered his mark up (from $55 \%$ to $50 \%$ ) it may be that he is in a competitive situation and has lowered his selling price to increase sales volume and rate of stock turnover (up for 9 to 10). Perhaps advertising was increased thus lowering the NP\% (from 10\% to 8\%) but this boosted sales volume.

The return on capital employed is a key profitability ratio and this has decreased (from $15 \%$ to $14 \%$ ). The current ratio is tighter at 1.5:1 but this is not critical.
Overall I would disagree with Monty that his business performance is substantially better in 2006 in comparison to 2005.
The key here is for the candidate to find reasons (identify a strategy) to explain their contention. Reasons must have validity and must be backed up by figures.

(b) Identify 1 difference between the final accounts of profit making and nonprofit making organisations and explain its importance

## Example Differences

Profit making prepare profit and loss account (1 mark) whereas non profit making prepare income and expenditure account (1 mark).
OR ....Profit making uses concept of capital (1 mark) in Balance sheet whereas non profit uses accumulated fund (1 mark).

## Importance

Income and expenditure account calculates surplus or deficit rather than profit or loss ...indicating the nature of the organisation to provide a service ( $\mathbf{1}$ mark) rather than make a profit (1 mark).
Use of word capital is linked with profit making (1 mark) whereas accumulated fund implies service rather than profit (1 mark).

Award $\mathbf{2}$ marks for acceptable difference
Award $\mathbf{2}$ marks for importance of stated difference
